(54) Title: METHOD AND DEVICE FOR STORING CONTENT ON A REMOVABLE MEDIUM

(57) Abstract: The method consists of providing (1) a user interface for selecting a content item stored on a storage means, retrieving (3) a further content item related to the content item from a system on a network using an identification of the content item, and storing (5) the further content item on the removable medium. The electronic device contains a writer (23), a control unit (25), and a network interface (27). The control unit (25) is able to use an input device and an output device to enable a user to select a content item stored on a storage means (33), to use the network interface (27) for retrieving a further content item related to the content item from a system on a network using an identification of the content item, and to use the writer (23) for storing the further content item on the removable medium. The computer program product enables, upon its execution, a programmable apparatus to function as the electronic device.
